

Telescopic Shaft Protector

Accessoires

The Telescopic shaft protector offers you a more safe environment to work in. It's designed to prevent any hazardous situations and will provide better protection on a bigger range of the Dispermill Discovery shaft. The telescopic shaft protector is available as an option for the Dispermill Discovery 100, 200 and 300.

The fixation knob makes it easy to adjust the height of the Telescopic Shaft protector to the vessel height. The stainless steel design contributes to an easy cleaning process. Besides, the holes at the top section have been developed to avoid a vacuum effect that results in substance inside the mechanism.
